

Virtual Cash Controller

COPY & PRINT CONTROL

Control access and integrate your operation—Virtual Cash has the complete online solution for print and copy control.

The **Virtual Cash Controller (VCC)** works with leading market software products to control copier, printer, fax, and microfilm output in office, school, and library environments. The VCC plugs into a network hub or switch to communicate with your central accounts database, which tracks activity at all your office machines.

Patrons key their account number into the VCC or swipe virtually any ABA magnetic stripe card (student ID, library card, grocery store card, even proximity card). This enables the copier or other device and charges the job to the patron's account.

Ideal solution for public libraries, universities, hospitals, law offices, government facilities ...

S P E C S

BENEFITS

Secure. Patrons are guaranteed secure access to unattended devices at your facility.

Networked Solution. Streamline your networked print and copy environments. The VCC lets you eliminate proprietary debit cards and migrate to an online, accounts-based system that automatically tracks activity at all your printers and copiers in a single database.

Convenient Printing. Unlike with direct printing or debit card solutions, users can pick up their print jobs wherever and whenever they choose—in a different building, after class, on their way home. They simply identify themselves at the printer with their account number, and once the account is verified, the VCC displays a list of their jobs. The printing follows the user!

Future Proof. You don't need to wait for product upgrades to arrive—with our flash upgrade, new firmware is available via a password-protected Web interface.

FEATURES

Robust. The sturdy case, clear display, and ergonomically designed keypad make the VCC ideal for public use.

Flexible. The VCC works with all leading print vending software products on the market today.

Convenient. One low-cost device controls copy and print output on most traditional and multi-function copiers. Color, black & white, and different media sizes can all be controlled with the VCC.

INTERFACES

- ABA track 2 card swipe, Prox by HID, or optional Mifare® proximity card reader
- Barcode scanner
- 2 x 20-character display
- 16-character keypad with alphanumeric input
- 10base-T Ethernet connection
- Copier interface attaches to all major brands of copier

Adding value
to accounts is
easy ...

with Virtual Cash's **Virtual Cash Acceptor Add Value Station**. A sister product to the VCC, this self-service device is equipped with a bill acceptor (or optional cash acceptor) and is networked to the central accounts database. Users can deposit funds into their accounts any time.
