Blueprint Enterprise: PrintHere

Printing that makes a difference

**It's a matter of confidentiality... it's a matter of convenience...
it's a matter of fact.**

Most people take printing for granted. You send a document to print, you pick up the job. It is such a simple, common part of business, many don't question whether the process can be improved.

But the ways in which your company prints can be improved significantly—and because it is such a common occurrence, the net result of any printing improvement is dramatic and far-reaching.

With PrintHere™ and Secure Release functionality from Pharos, printing in your enterprise is more secure, more convenient, and more flexible.

PrintHere: Enables information workers to send print jobs from anywhere to any printer or multifunction device installed on your network.

Secure Release: Holds print jobs at the device until users are physically present to release them, ensuring proprietary business information remains confidential.

**Powerful Pharos
solutions for everyone
who needs to print.**

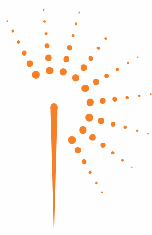

*Pharos printing solutions
are enabled by:*

Blueprint Enterprise

Cost control, confidentiality, convenience.

With Pharos, waste can be reduced by up to 40%

Files are sent from any workstation.

Users enter enterprise authentication credentials at the device.

The document is released to print.

Files are sent from any PC or wireless device.

Users release the job from the most convenient, compatible device.

Flexible printing

PrintHere

Your office environment is constantly on the move. Mobile workers are able to perform your organization's work from the office, from the home, and from the road. For them to work most productively and efficiently, it's imperative to offer powerful, flexible printing services, no matter where they are.

Pharos System's PrintHere capability empowers your information workers to print documents on the devices that are most convenient for them. Users simply send a job to print from their desktops or from wireless devices just like normal. However rather than being sent to a specific printer, the job is sent to a centralized print server. Users then walk to the most convenient networked printer, enter their Network ID number or use their Proximity ID Cards, and pick up their jobs.

Now, with the Pharos PrintHere capability, mobile workers can print on cost-efficient, high quality color and black and white devices from anywhere. Users who have appointments in other buildings in the enterprise can print their documents on devices closer to their ultimate destinations. And employees don't have to make the decision on where to pick up their jobs until it's time to pick them up.

Iron-clad security

Secure Release

Forget about regulatory compliance with governmental mandates like Sarbanes Oxley, HIPAA, and Gramm-Leach-Bliley. After all, you shouldn't be securing confidential information because your organization is forced to by external sources. You should protect your important business and client information for the simple reason that it is *your* important business and client information. With Pharos System's Secure Release capability, you can rest assured that only the people who send the documents can retrieve the documents from the printer.

Users send a file to any desired network printer. At their convenience, they walk to the printer and either enter their enterprise-assigned authentication credentials or use their Proximity ID Card to release their jobs (and only their jobs). The document prints while they are standing over the machine, ensuring your important information remains confidential.

Working together Pharos' Secure Release and PrintHere capabilities empower users to release only the jobs they actually need. This significantly reduces waste, recycling costs, and associated printing expenses (paper, consumables, "click charges") by eliminating banner pages, inadvertent "misprints", and redundant jobs.
